Letter of reference

TE-VOGS is a solution increasing safety of ground movements at airports, harbours or logistics centers. It provides positioning of individual mobile units connected to the TE-VOGS network, transmission and visualization of traffic situation on graphic displays installed in vehicles and dispatcher control rooms. The solution allows to improve planning resources and by several built-in Safety nets, it supports situational awareness of the drivers and Safety of operations significantly.

The TE-VOGS has ambition to become one of the pillars of Safety at modern airports. It fits into the concept of SESAR. The system offers many functions and capabilities, may contribute to more efficient exploitation of mobile units as well as to expediting and facilitating the work of airport operating personnel.

We hereby confirm, that the pilot project at Vaclav Havel Airport Prague, Czech Republic, was conducted with successful results and the TE-VOGS system has the potential to be deployed at other airports.
