TO WHOM IT MAY CONCERN

We herewith confirming the use of the real-time, vehicle tracking device called TE-VOGS, produced and provided by the company Aero4TE.

The product is in use since 1 February 2018, where Aero4TE offered via a specified trial period to test the product on a total of 6 vehicles. The test was conducted successfully and we as the Airport WRO entered into a purchasing contract by the Mid of February 2019. A local representative serves as the service point of contact should we have any requirements.

We are recommending herewith the product to other airports, airport entities, in order to gain full and at all time vehicle guidance activity control. With the implementation of TE-VOGS we have significantly received an overall coordination tool, for all airside cars, as well as for ad hoc entering vehicles.
