Wrocław, 4th June 2020

TO WHOM IT MAY CONCERN

We are herewith confirming, the use of the real-time, vehicle tracking devices, called TE-VOGS. A product developed, produced, deployed and serviced by Aero4TE s.r.o., Czech Republic.

TE-VOGS, a SESAR/NexGEN compliant product, serves us since Feb 2018, first in test mode, since 2019 in live mode, per today on a total of 35 vehicles, to increase safety on air sided airport surface. We have chosen the option set up with a Roof Unit, Tablet in car.

We are planning to extend the installation base, up to 50 vehicles, latest in 2021.

We purchased the solution TE-VOGS LTE based, as a redundancy to our radio communication, or wise-versa, especially during low visibility times. We are able to actively task and exchange messages and pictures of findings, occurring to all, or in defined groups. Tasking of drivers, recording of speed limits, increased safety and situational awareness at our Airport, were other elements of our safety concept, that we have covered with this product, provided by Aero4TE.

We are able to recommend, herewith, the product to other Airports/Airport Operation Centers.
